Cleaning Overview

Use either procedure 1 or procedure 2 ("Quick Clean"), depending on your preference.

- DO clean the unit after every 25 treatments, when the paraffin is no longer clear, or whenever sediment accumulates on the bottom.
- DO NOT use sharp objects to remove solidified paraffin.
- DO NOT scratch or damage the inside tank coating.
- DO NOT immerse the unit in water.
- DO NOT use abrasives of any kind when cleaning the tank. Abrasive scouring powders will damage the tank finish.

TIP: To easily remove the grille without getting paraffin on your hand, slip a plastic liner over your hand, extending it to the elbow. With your plastic-covered hand, reach into paraffin and remove the grille. Let the grille drip dry over the unit, and then place it on a nonporous surface. (Do not place the grille on fabric or carpet.)

Procedure 1

The paraffin should be solidified before starting procedure 1. Therefore, start the day prior to when you would like to use the bath again.

1. Unplug the unit. Remove the lid and grille. Allow the paraffin to solidify overnight.
2. After the paraffin is solid, plug the unit in for a few minutes, or just until the cake of paraffin loosen from the sides and bottom of the unit. Then unplug the unit. DO NOT leave an empty unit plugged in. To do so will cause the unit to get excessively hot, causing possible damage to the unit.
3. Press down firmly on one end of the paraffin, tipping the opposite end up. Then lift out the cake and place it on paper towels.
4. If you wish to reuse the paraffin, carefully shave off the bottom layers that contain accumulated sediment.
5. Blot up any remaining paraffin in the tank with paper towels. If any solidified paraffin remains inside or on the outside of the unit, soften carefully with a hair dryer and remove with a paper towel.
6. Clean the inside and outside of the unit with an all-purpose cleaner. Thoroughly wipe the unit dry.
7. If you are reusing the paraffin, place the cake back in the unit. Then, put the grille on top of the unmelted paraffin. Replace the lid, and plug the bath in.
8. If necessary, add additional paraffin to your bath to bring the amount up to the required level. Use only TherabathPRO refill paraffin.

Procedure 2 ("Quick Clean")

The paraffin remains melted during this procedure, and therefore is faster than procedure 1.

1. Do not unplug the TherabathPRO. Remove the lid and grille. Allow the paraffin to remain undisturbed for a few minutes so that any stirred-up particles can resettle on the bottom.
2. Slip a plastic liner over your hand, extending it to the elbow. Using several folded-up, lint-free paper towels, SLOWLY wipe along the bottom and then up one end of the bath, collecting the sediment in the paper towels. Slowly bring paper towels out of the paraffin, being careful not to let sediment drop back in. Allow the paper towels to drain over the bath until the paraffin stops dripping.
3. Grab the plastic liner from the top edge and pull it over your hand, turning the liner inside-out and enclosing the paper towels. Discard the liner and paper towels.
4. Repeat this process as necessary. Replace the grille and lid when finished.
5. If necessary, add more paraffin to your bath to bring the amount up to the required level. Use only TherabathPRO refill paraffin.
6. To clean the outside, first remove any solidified pieces of paraffin, and then use an all-purpose cleaner.

How to Change the Paraffin Wax in Your TherabathPRO

If you would like to change the scent of paraffin wax in your TherabathPRO, follow these instructions. Start the day prior to when you would like to use the bath again.

1. Unplug the unit. Remove the lid and grille. Allow the paraffin to solidify overnight.
2. After the paraffin is solid, plug the unit in for a few minutes, or just until the cake of paraffin loosen from the sides and bottom of the unit. Then unplug the unit. DO NOT leave an empty unit plugged in. To do so will cause the unit to get excessively hot, causing possible damage to the unit.
3. Press down firmly on one end of the paraffin, tipping the opposite end up. Then lift out the cake and place it on paper towels.
4. If you wish to reuse the paraffin, carefully shave off the bottom layers that contain accumulated sediment.
5. Blot up any remaining paraffin in the tank with paper towels. If any solidified paraffin remains inside or on the outside of the unit, soften carefully with a hair dryer and remove with a paper towel.
6. Add the new scent of TherabathPRO paraffin wax:
   - Carefully open the bags of paraffin over the unit.
   - Add 6 pounds (2.72 kg.) of TherabathPRO paraffin.
   - Place the grille on top of the unmelted paraffin.
   - Rest the lid lightly on top of the paraffin and grille. The paraffin will compact as it melts.
7. Plug the TherabathPRO into an electrical outlet of the proper voltage.

In Case of Paraffin Spills

1. Scrape off as much of the solidified paraffin as possible.
2. Use a hair dryer or an iron (on top of paper towels) to melt the remaining paraffin, and then blot the melted paraffin up with paper towels.
3. Use a wax- or paraffin-removing solution (available at grocery and discount stores). Check fabric care instructions first. If possible, put the item in the washing machine to remove any remaining oil. Dry cleaning solutions and spot removers also work for some items.
4. For nonporous surfaces, first remove any pieces of solidified paraffin. Then use an all-purpose cleaner. Read the cleaner's instructions before using.
